Now There's a Safe, yet Effective
Method for Preserving Baled Hay...
CropSaver™ from New Holland®

90 DAYS
NO INTEREST
NO PAYMENT

New Holland CropSaver™ is a buffered acid used to help preserve all types of hay including alfalfa and grass. CropSaver™ is composed of two main ingredients—propionic acid and citric acid. The propionic level in CropSaver™, although one of the highest in the industry, is completely safe because it is chemically buffered and neutralized. It is gentle as rainwater with a pH of 6.0 and does everything straight propionic acid will, but without the corrosion or danger. Citric acid has been used for years to preserve food color and smell. In CropSaver™, it helps to maintain both the fresh smell and green color of hay, even after it's stored. Used with a New Holland applicator, CropSaver™ enables you to bale your hay at a maximum 30% moisture level.

270 Gallon Totes

2,380 LBS.—List \$3064

December	\$2162.00 = \$.91 per lb.
